

Create a website in REACT using at least 4 components (besides the outermost 'app' component). Arrange the components in a header/left column/right column/footer arrangement, similar to the following:

## Requirements

- At least 4 components (in addition to app)
- 2 components implemented as functions
- 2 components implemented as classes with state
  - One stateful component - show current time (updating)
  - One stateful component - show click count of a button somewhere in the app.
